Md Nayeem Hossain

Software Developer

Full-stack software developer with 2+ years of production experience building mobile and web applications. Owns features end to end, from stakeholder discussions and API design to data modeling, implementation, integration, and release. Specializes in React Native (Expo), React/Next.js, and Node.js (Express/NestJS), with hands-on experience across relational and NoSQL databases, including PostgreSQL and MongoDB. Co-built a sports community platform used by 7000+ people across four European countries. Proven track record collaborating directly with founders to translate business goals into shipped features.

WORK EXPERIENCE

Founding Software Developer, athme *Jan 2025 – Present*

- *Co-built* a sports community platform with the CTO, used by 7000+ people in Denmark, Sweden, Slovakia and Spain (4.8★ on iOS and Android; backed by Google for Startups and Microsoft). Delivered features across the **Expo React Native** app, the **Next.js** web client and the **Node.js** backend.
- *Proposed and led* discussions with the CEO and CTO to define KPIs, then built a **Next.js** admin dashboard combining **Firebase Analytics** and database data to track profit, user growth and repeat customers by sport; padel and football drove the most profit, so the team focused events on them.
- *Implemented* **Firebase Authentication** with Google and Apple sign-in (**OAuth 2.0**, **OpenID Connect**) despite no prior Firebase experience; shipped to production on iOS and Android.
- *Shipped* real-time geospatial event discovery with **Mapbox GL** and rebuilt state management on **React Context API** to resolve a critical Android performance issue.
- *Delivered* country-based sport discovery in two phases: a frontend geolocation release (Denmark fallback) to meet the Slovakia launch, then the full API, data model and backend logic.

Software Developer Intern, Klimakampen ApS *Aug 2023 – Jan 2024*

- *Built* full-stack features for a climate-habit app within a cross-functional team, from **React Native/Expo** UI to **AWS Lambda** endpoints and **DynamoDB** data, including swipeable, animated activity lists.
- *Designed* and built a streak system solo: **Node.js/AWS Lambda** endpoints with **DynamoDB** storage, a home-screen streak tracker and a custom calendar in **React Native** with no external libraries, shipped to users.

PROJECTS

Compliance Tracker | GitHub

- *Engineered* a full-stack app with **Next.js**, **TypeScript**, **Prisma**, **PostgreSQL**, **Docker** and **Auth.js** that helps companies track certification requirements and document expiry, with role-based access for users and admins.
- *Integrated* the **Gemini API** for two bounded tasks: classifying company descriptions and extracting certificate data. AI never writes directly to the database. Unmatched suggestions await admin approval.
- *Enforced* code quality with **ESLint**, **Prettier**, **TypeScript** checks, **Husky** pre-commit hooks and **GitHub Actions** continuous integration (CI).

Online Learning Platform

- *Built* a role-based LMS with **JWT** authentication; designed and documented a REST API in **NestJS** with **Swagger**, covering course management and enrolment flows.

SKILLS

Languages: TypeScript, JavaScript, Java

Backend: Node.js (Express, NestJS)

Frontend & Mobile: React.js, Next.js, Expo React Native

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Auth: OAuth 2.0 / OpenID Connect, Firebase Auth, JWT, role-based access

DevOps & Cloud: Docker, AWS Lambda, Vercel, Netlify

Tools: Prisma, Git, GitHub Actions, ESLint, Prettier, Husky, Jira, Postman, Swagger, n8n

EDUCATION

Bachelor's in Web Development - *Copenhagen Business Academy | Aug 2024 – Jan 2026*

AP Degree in Computer Science - *Copenhagen School of Design and Technology (KEA) | Aug 2021 – Jan 2024*
